Art Unit: 1793

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 13-19, 60-63, 65, 67-72, 74-76, 78-90 and 92-96 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. See the reasons given in the last Office Action. Applicants' argument, that the description describes the modeling of various parameters in a combustion system, and how modeling these various parameters can be used to predict various aspects of the operation of a combustion system, is not convincing, since applicants have not explained why it would not require undue experimentation for one of ordinary skill in the art to determine how the various computer programs are interconnected to simultaneously model such parameters as flow patterns, temperature patterns and condensation reactions. Moreover, applicants have not explained where the specification provides enablement for properly programming the CHEMKIN and FLUENT computer models to perform the disclosed and claimed functions.
